

SEAPAC Conference 2017

Tuesday 14 & Wednesday 15 March 2017

The go-to event for protection, automation and control know-how!

The 6th edition of our highly successful South East Asia Protection, Automation and Control conference is scheduled for March 2017.

This is the go-to event for industry participants seeking the latest technical expertise, collaboration and networking for this crucial field.

Wide ranging papers and open forums

SEAPAC is hosted by CIGRE Australia's B5 Panel. The conference features a wide range of subjects, from traditional protection issues through to evolving technology deployment. We expect up to 40 papers will be presented, with several opportunities for open forum questions to be put to the authors from the audience.

Engineers from major utilities, vendors and consultancies will share expertise on the latest trends in the field and we are expecting this popular event to continue to deliver the know-how and lively discussion attendees have become familiar with.

SEAPAC 17

Pullman Hotel
65 Queens Road, Albert Park
Melbourne, Victoria
14th & 15th March 2017

If you want to collaborate and network with the thought leaders, mark these dates in your diary!

AIM OF CONFERENCE

There is increasing pressure on utilities to provide ever more reliable and robust electricity supply to the consumer under tight regulatory requirements. With new developments in protection and automation, it is timely to review what the industry is achieving in its current operations and take the lessons forward as the industry is about to embark on the next evolution of technology. This seminar will focus on best practice protection and automation issues in the region.

SEAPAC is an excellent forum for both regional and international participants to discuss and share thoughts and views on current industry best practice and emerging technologies.

The scope of the conference provides wide opportunity to discuss project strategies for development, justification, implementation and project management as well as design objectives and solutions for green field projects, and brown field developments, through to full life cycle management of the asset. Projects encompassing direct equipment replacements through to complete technology shifts will be of interest.

The ever increasing use of automation and Intelligent Electronic Device technology in substations means that several disciplines will be represented at SEAPAC.

WHO SHOULD ATTEND

Protection engineers and technicians, telecommunication and network specialists, SCADA system specialists as well as operations and maintenance staff are encouraged to be authors and/or attend. Utility, suppliers, consultants and education organizations will be key contributors to the conference.

KEY THEMES

Papers will be delivered covering the latest views on a range of applications, including protection applications, fault analysis, project management, communication system requirements and the topic of IEC61850 and process bus applications.

KEYNOTE SPEAKER

Mr Nino Ficca, Managing Director of AusNet Services and Chairman of CIGRE Australia, delivering the keynote address on 'Current Challenges and future pathways for the Industry'.

INVESTMENT

DATE	March 14–15, 2017 (Optional Tour 16th March)			
COST incl GST		Early Bird (Jan 31, 2017)	Normal	Fifth and Subsequent
	CIGRE Member	\$1,283	\$1,399	\$1,224
	Non member	\$1,458	\$1,562	\$1,367
	NGN [Young Engineer <35]	\$150		
VENUE	Pullman Melbourne, Albert Park Hotel, Melbourne Vic, Australia.			

[Attendees to make their own accommodation arrangements].

- Registration includes morning/afternoon tea, lunch and networking dinner.
- Full time students and young engineers must be members of CIGRE's NGN to qualify for the NGN rate. CIGRE Membership is free to Full time students and Young employees of Corporate and Collective members. Join here: cigreaustralia.org.au/join
